## **VENUE**

The *7<sup>th</sup> International IUVSTA School on Advanced Synchrotron Radiation Techniques for Fine Analysis of Materials* will take place during June 26-30, 2006 in the Faculty of Sciences of the University of Salamanca, [www.usal.es](http://www.usal.es). Salamanca is an old town and its University is one of the oldest in Europe starting in 1218. The temperature even in summer time is lovely and the atmosphere of the town is very enjoyable. It is 220 km from Madrid, the capital of Spain. Salamanca can be reached from Madrid by train in 2h 30 min or buses in 2h 30 min and scheduled every hour. Madrid is linked by plane with most of the cities over the world. For more information, see <http://www.salamanca.net>. About train connections visit [www.renfe.es](http://www.renfe.es), for buses visit [www.auto-res.net](http://www.auto-res.net).

## COURSE AIM

The School has been structured in order to include didactic lectures covering the main areas related with Synchrotron radiation sources. Also, tutorial groups will carry out typical data treatments frequently used in Synchrotron radiation research activities. The organizer will provide to the participants relevant text materials and useful standards codes as well as a wide variety of subroutines compatible with personal computers. That will conform and indispensable and useful sets of tools for any research group interested in performing a systematic Synchrotron radiation research with a minimum activity

Chairpersons

M. C. Asensio and J Ávila
